Sample Customer Retention Policy

Document type: Synthetic sample for development and testing
Version: 1.0

1. Purpose

This sample policy describes possible approaches for identifying customers at risk of churn and offering appropriate retention support. It is intended for testing a customer churn prediction and RAG assistant project.

2. Month-to-Month Contracts

Customers on month-to-month contracts may have greater flexibility to cancel their service. When a customer shows elevated churn risk, a retention team may review service concerns, billing issues, and customer satisfaction before recommending an action.

3. High Monthly Charges

Customers with high monthly charges may be concerned about the value they receive. Support teams can review the customer's current plan, explain available features, and check whether a lower-cost plan is suitable.

4. Customer Support Issues

When customers report repeated technical or billing issues, support teams should review the ticket history, confirm whether previous issues were resolved, and escalate unresolved problems to the appropriate team.

5. New Customers

Customers with short tenure may still be learning how to use the service. Appropriate actions may include onboarding assistance, setup guidance, and follow-up support.

6. Payment Concerns

When customers experience payment difficulties, support teams may explain available payment methods and help them understand their invoices. Any payment or billing changes must follow the organization's approved procedures.

7. Retention Recommendation Guidelines

Recommendations should be relevant to the customer's documented needs. Do not promise discounts, refunds, or special offers unless the customer is confirmed to be eligible under an approved policy.

8. Escalation

Complaints involving unresolved service interruptions, disputed charges, or repeated support failures should be referred to the appropriate support or retention team.

9. Important Notice

This document is synthetic sample content created for software development and testing. It does not represent an actual company's policy, approved offer, or guarantee of customer eligibility.
